Wits University Faculty of Science post-graduate student AI declaration

I understand that the use of generative AI tools (such as ChatGPT or similar) without explicitly declaring such use constitutes a form of plagiarism and is classified by Wits University as academic misconduct.

I declare that in the course of conducting the research towards my degree or in the preparation of this thesis/dissertation/research report (select one by marking with an X):

I **did not** make use of generative AI tools [ ]

[X] I **did** make use of generative AI tools for the following (tick all that apply):

1.	Idea Generation (research problem/design, hypothesis)	X
2.	Sourcing Related Work (summarising, identifying sources)	X
3.	Methods and Experiment Design (experiment setup, model tuning)	X
4.	Data Analysis (presentation, coding, interpretation)	X
5.	Theoretical Development (theorem proving, conceptual analysis)	
6.	Code Development (generating algorithms, writing scripts)	X
7.	Presentation (rendering graphics, formatting)	X
8.	Editing (grammar, readability)	X
9.	Writing (text generation, document structuring)	X
10.	Citation Formatting (structuring, organising)	X

If other uses were involved, please specify below:

Generative AI tool used (list all)	**Used for?**
ChatGPT (OpenAI)	Early supervision and planning: experiment ideas, decision rules and reviewing results.
Claude (Anthropic)	Supervision: planning experiments, decision rules, reviewing results against saved outputs, drafting and editing the report.
Claude Code (Anthropic)	Writing, testing and running analysis code and cluster jobs.
OpenAI Codex	Code review, commits and report editing and checking.

If generative AI tools were used as an integral part of the experimental design or in the direct execution of my research, I confirm that details of this use are clearly outlined in the relevant experimental/methodology chapters of my thesis/dissertation/research report.

Student number: 2653934

Date: 30 October 2026

Relevant prompts

AI tools were used under a fixed division of roles: an AI supervisor (ChatGPT, later Claude) proposed experiments and ruled on results in a written, append-only supervision log; Claude Code wrote and ran code and cluster jobs; Codex reviewed and committed changes. Every experiment, job submission and commit required my explicit approval. The full log is kept in the project repository. Representative prompts follow.

Selected prompts are quoted as written; [...] marks omitted text.

Review

- "check what me and codex did"
- "Have a look because I asked Codex [...] give me the code prompt to [...] double check everything"
- "Did we have a page limit? Hairong said the limit is 8 pages [...]" / "You did read the proposal to see what I said and how it was said there right?"

Graphs and figures

- "Does figure 5 hold any significant meaning and really add that much to the report? [...] I would like the runtime graph, that is cool."
- "Also dont we have the architecture in pdf form somewhere where I asked you to make them a while ago in latex?"
- "Would we not want to include images of the actual dataset or is that not something this paper needs?"

Commit messages and cluster commands

- "I may need you to just give me the commands and a very concise message instead [...]. You know that there are some stuff that I just don't want to have included in a commit message right, like the AI names or dates."
- "bigbatch seems to be overloaded again so can we use batch or do we need bigbatch for these?"
- "Why did we tie the rcc jobs to nodes [...] do we need exclusive nodes? [...] can we not run it all on batch?"

Notion and documentation

- "Add the plan to the Notion and docs."
- "Ok I'll just let it run through the night [...] make a note of everything [...] update the Notion."
- "Change task 10 to exclude the report and then let's make a bunch of new tasks for the report."
